

ATRA[®] DRIVER SYSTEM SAVES MONEY & TIME

The ATRA[®] Anchor System saves time and material costs when installing the stake and tendon components of the GEOWEB[®] System. The patented ATRA Clip, inserted on the end of a cut-to-length #4 rebar stake, forms an ATRA Stake Anchor. The ATRA Clip eliminates the extra material and time required to bend J-pin anchors. Or, use a Glass Fiber Reinforced Polymer ATRA GFRP stake when a corrosion-resistant anchor is needed.

Save even more time and money with the new ATRA Driver System.

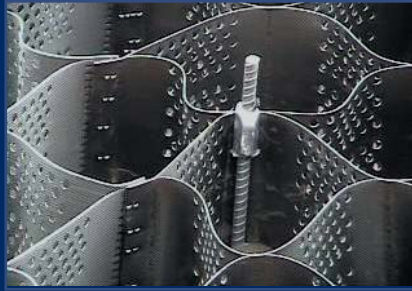

The ATRA Driver System kit consists of an electric driver, cord, carrying case and specially designed gad that fits over the ATRA Clip. The ATRA Driver System drives the ATRA Stake to the proper depth and angle in one motion. Install an anchor stake in 1/4 the time compared to hammering by hand. Better still, ATRA Driver System drives the stake correctly every time — no more miss-hits, bent stakes, incorrectly slanted, and non-flushed or non-recessed driven anchors.

Do the job right + faster = saves time & money.

Finishing

Hand Hammering: Not Perfect

ATRA® Driver System: Perfect

The ATRA Driver System: electric driver, cord, carrying case and specially designed ATRA gad.

DO THE MATH! Sample Project #1:

Labor Method	# of stakes	time/stake (sec)*	total time (hrs)	cost of labor/hr	total cost of labor
Hand hammering	7,500	120 seconds	250 hours	\$ 20/hr	\$ 5,000.00
ATRA Driver System	7,500	30 seconds	62.5 hours	\$ 20/hr	\$ 1,250.00
Total Labor Savings: \$3,750.00 (or 75%)					

DO THE MATH! Sample Project #2:

Labor Method	# of stakes	time/stake (sec)*	total time (hrs)	cost of labor/hr	total cost of labor
Hand hammering	15,000	45 seconds	187.5 hrs	\$ 20/hr	\$3,750.00
ATRA Driver System	15,000	15 seconds	62.5 hrs	\$ 20/hr	\$1,250.00
Total Labor Savings: \$2,500.00 (or 67%)					

* time/stake dependent upon stake length & soil conditions
